Project Name	Smart Lender – AI-Powered Loan Approval Prediction System
Maximum Marks	2 Marks

Customer Journey Map

Map out the customer's experience stage-by-stage, capturing their actions, touchpoints, thoughts, and feelings, along with process ownership and improvement opportunities at each stage.

Phase of Journey	Stage 1	Stage 2	Stage 3
Actions <i>What does the customer do?</i>	- Visits the Smart Lender web application - Fills in the loan application form with personal and financial details - Submits the form for ML-based evaluation	- Waits for the system to process and evaluate the application - Credit officer reviews the ML prediction result - Additional documents requested if flagged as high-risk	- Receives instant loan approval or rejection notification - Views the predicted outcome on the result screen - Proceeds to loan disbursement or seeks clarification
Touchpoint <i>What part of the service do they interact with?</i>	- Flask web application UI (loan form) - Input fields: gender, income, loan amount, credit history, etc. - Submit button triggering XGBoost prediction	- ML prediction engine (XGBoost model) - Credit officer dashboard showing risk flags - Document upload portal for additional verification	- Result display page showing approval/rejection - Email or SMS notification system - Banking portal for loan disbursement
Customer Thought <i>What is the customer thinking?</i>	- Will the application be straightforward to complete? - Is my data secure on this platform? - How long will the evaluation take?	- Why is my application flagged for review? - Is the ML model accurately assessing my profile? - Will my irregular income affect the decision?	- Did the system evaluate my application fairly? - When will I receive the loan amount? - Can I appeal the decision if rejected?
Customer Feeling <i>What is the customer feeling?</i>	- Curious and hopeful about quick approval - Slightly anxious about providing personal data - Optimistic about ML-driven fairness	- Nervous if application is flagged high-risk - Uncertain about the evaluation criteria - Impatient waiting for a decision	- Relieved if approved; disappointed if rejected - Confident in the process if it feels transparent - Eager to complete loan formalities quickly
Process Ownership <i>Who is in the lead on this?</i>	Credit Officer / Applicant	Credit Officer / ML System	Banking Operations Team
Opportunities <i>How can we improve this stage?</i>	- Add real-time field validation to reduce submission errors - Provide applicants with a checklist for required documents - Offer a loan eligibility pre-check before formal submission	- Display model confidence score to credit officers - Automate document requests for high-risk flagged applicants - Integrate alternative data sources to improve prediction accuracy	- Provide detailed explanation of approval/rejection reasoning - Enable applicants to re-apply with improved data after rejection - Automate disbursement workflows for approved low-risk applicants
